1st June 2023

WP6 Remote Sensing of the Atlantic in iFADO

Steve Groom +WP6 colleagues
sbg@pml.ac.uk

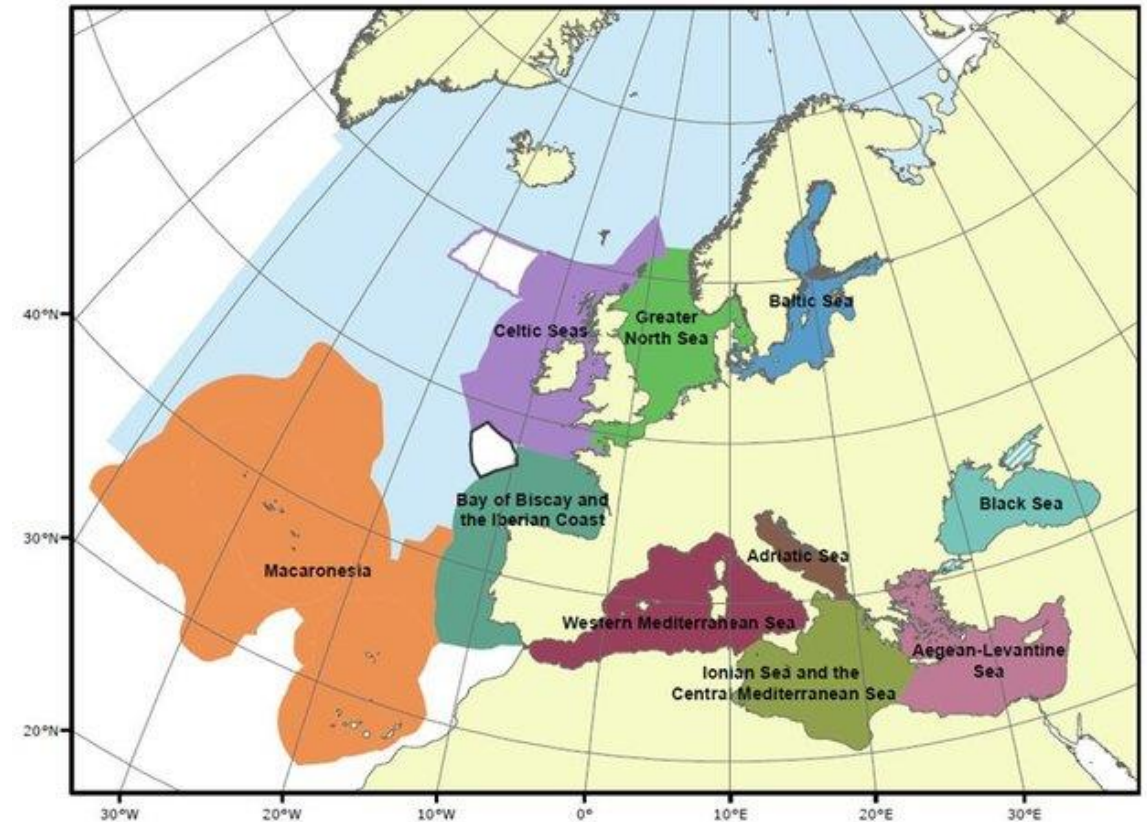

PML

Plymouth Marine
Laboratory

This project has received funding from the European Union's Interreg Atlantic Area programme under the grant EAPA_165/2016

- Marine Strategy Framework Directive monitoring is required over large areas away from the coast, not feasible purely with ships
- Satellite remote sensing (or Earth Observation, EO) can *complement* in situ observations with synoptic-scale, daily near-surface data (depending on cloud cover)
- The EC's Copernicus programme includes EO data services but further developments of products is needed

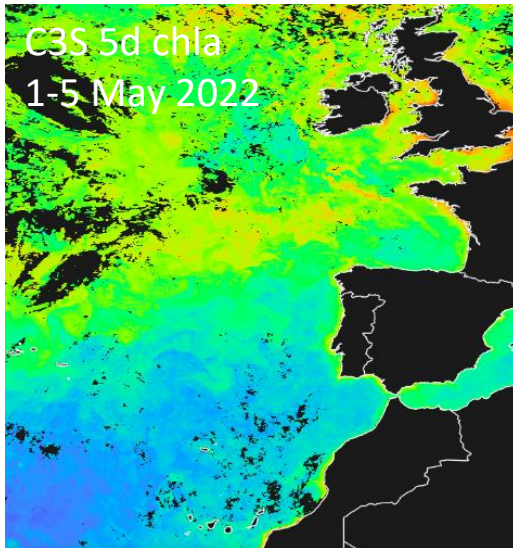

- Action 1: Coordination
- Action 2: Data gathering and harmonisation
 - Accessing EO data for iFADO project
 - Supporting iFADO cruises with near-real time data
 - Use of iFADO data for satellite cal/val
 - Upwelling off the Portuguese coast- Pedro
- Action 3: Novel EO derived products for marine litter accumulation
- Elise
- Action 4: Novel EO derived products for Phytoplankton
 - Size fractionated phytoplankton (MSFD biodiversity indicator) - Vanda
 - Primary production (MSFD biodiversity indicator) and water classes
- Action 5: Novel high resolution MSFD monitoring products

- Action 1: Coordination
- Action 2: Data gathering and harmonisation
 - Accessing EO data for iFADO project
 - Supporting iFADO cruises with near-real time data
 - Use of iFADO data for satellite cal/val
 - Upwelling off the Portuguese coast- Pedro
- Action 3: Novel EO derived products for marine litter accumulation - Elise
- Action 4: Novel EO derived products for Phytoplankton
 - Size fractionated phytoplankton (MSFD biodiversity indicator) - Vanda
 - Primary production (MSFD biodiversity indicator) and water classes
- Action 5: Novel high resolution MSFD monitoring products

- The EC Copernicus project provides EO data via services
 - Copernicus has developed during the 6+ years since iFADO was written

- In iFADO this was complemented with bespoke data processing or services not available from Copernicus
 - Near-real time support of cruises – guidance to features of interest
 - Validation of EO data – important for Copernicus
 - Higher resolution data

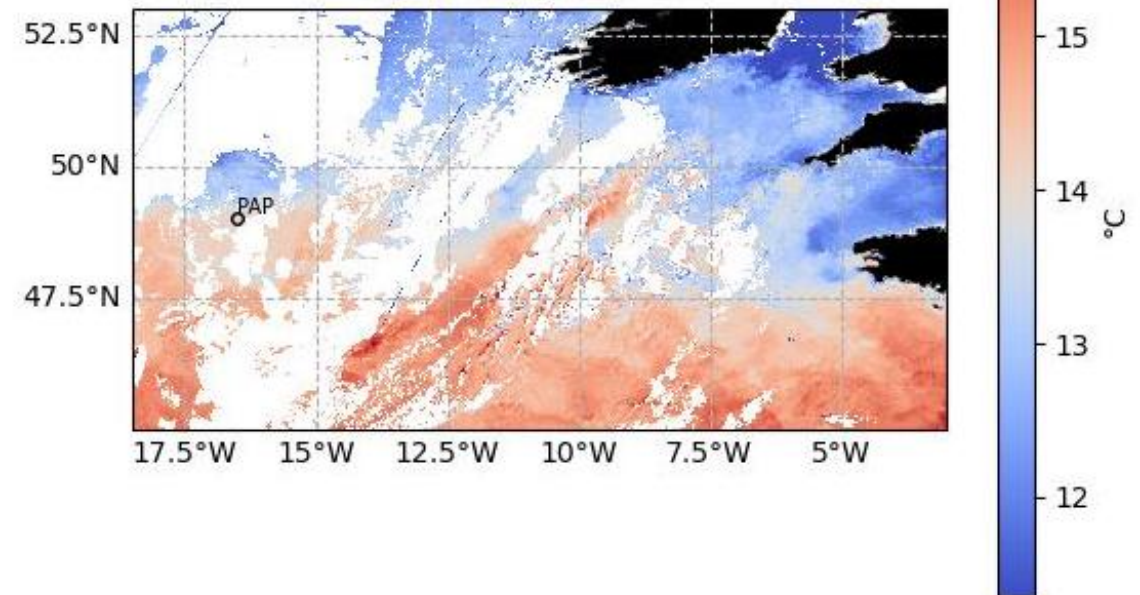

- RADPROF20 July 2020 IEO cruise, with IPMA onboard (for samples inc. HPLC by FCUL)
- Satellite data provided in near-real time during cruise by PML

- JC247 May 2023, to PAP-SO (samples inc. HPLC by FCUL)
- Satellite data provided in near-real time during cruise by PML

NRT OLCI 3a, chl: 2020-07-22 - 2020-07-22
Processed by NEODAAS

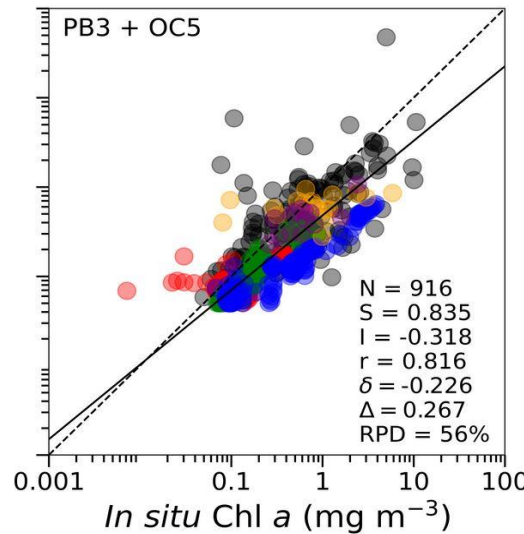

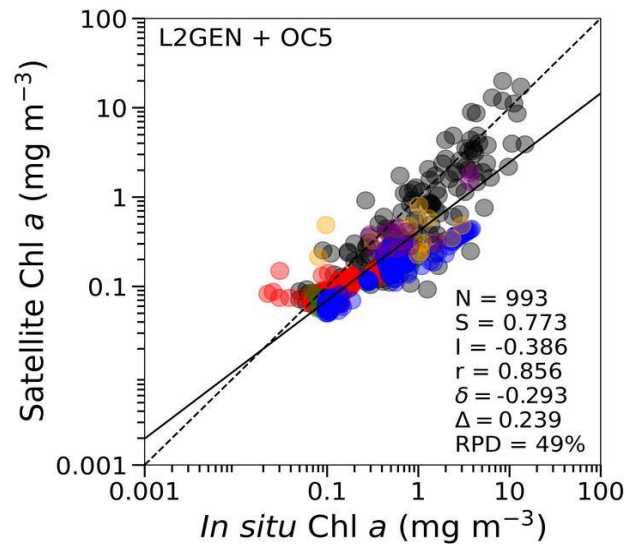

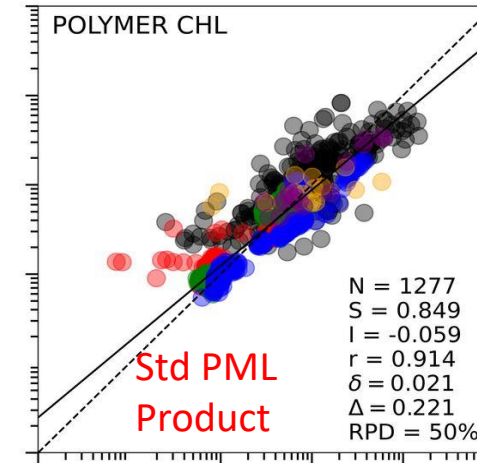

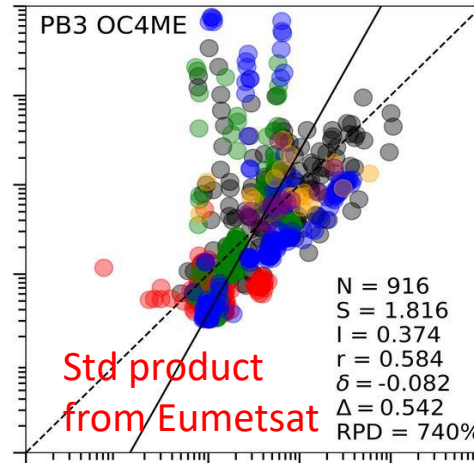

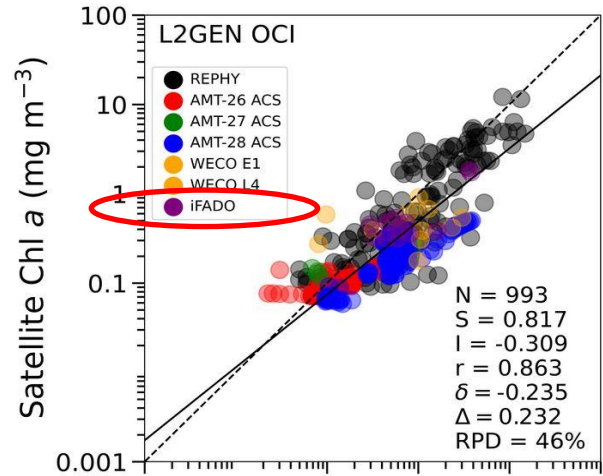

NRT Sentinel 3a SLSTR, sea_surface_temperature
2023-05-15 - 2023-05-21
Processed by NEODAAS

iFADO cruises with HPLC

	Iberian Cruises	Date	HPLC (nº surf and DCM)
1	DEPM2019	01/2019 to 02/2019	47
2	PELAGO2019	04/2019 to 05/2019	36
3	PELAGO2020	05/03/2020 to 09/03/2020	43
4	RADPROF2020	07/ 2020	59
5	RADPROF2021	08/ 2021	7
6	DEMP2022	03/2022 to 04/2022	15
7	PELAGO2022	01/03/2022 to 29/03/2022	22
8	RADIALES22	29/03/2022 to 12/07/2022	8
9	PELACUS0322	27/04/2022 to 30/04/2022	60
10	RADPROF0622	15/06/2022 to 22/06/2022	12
11	CARBO-ACID	08/ 2022	19
12	DEPM23	10/02/2023 to 21/02/2023	20
13	PELACUS23	02/03/2023 to 29/03/2023	22
	Total		370

	AMT/PAP Cruises	Date	HPLC (nº surf/DCM)
1	AMT28	23/09/2018 to 30/10/2018	66
2	AMT29	13/10/2019 to 25/11/2019	62
3	PAP JC231	01/05/2022 to 20/05/2022	12
4	AMT30	March – April 2023	64?
5	PAP	May 2023	12?
	Total		216

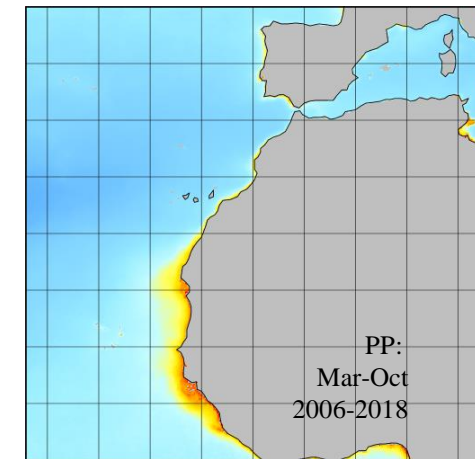

- ESA Ocean Colour CCI data are provided to CMEMS/C3S Multiple sensor, merged; 4km; daily
- iFADO data provide independent validation

- Tilstone and Land Contrasting patterns in primary production in the Atlantic Ocean over the past two decades in prep for Biogeosciences

- Contrasting patterns in primary production in the Atlantic Ocean over the past two decades.
- Computed a 21 year time series of PP using Ocean Colour data (September 1997-December 2018) for areas of similar phenology, climatology, and annual production in the north-east Atlantic Ocean, the Iberian Peninsula and Mauritania.

- Mean monthly PP from March to October using OC-CCI Ocean Colour data (provided by CMEMS) from 1997-2005 and 2006-2018 for the north-east Atlantic, Iberian peninsula and Mauritania.

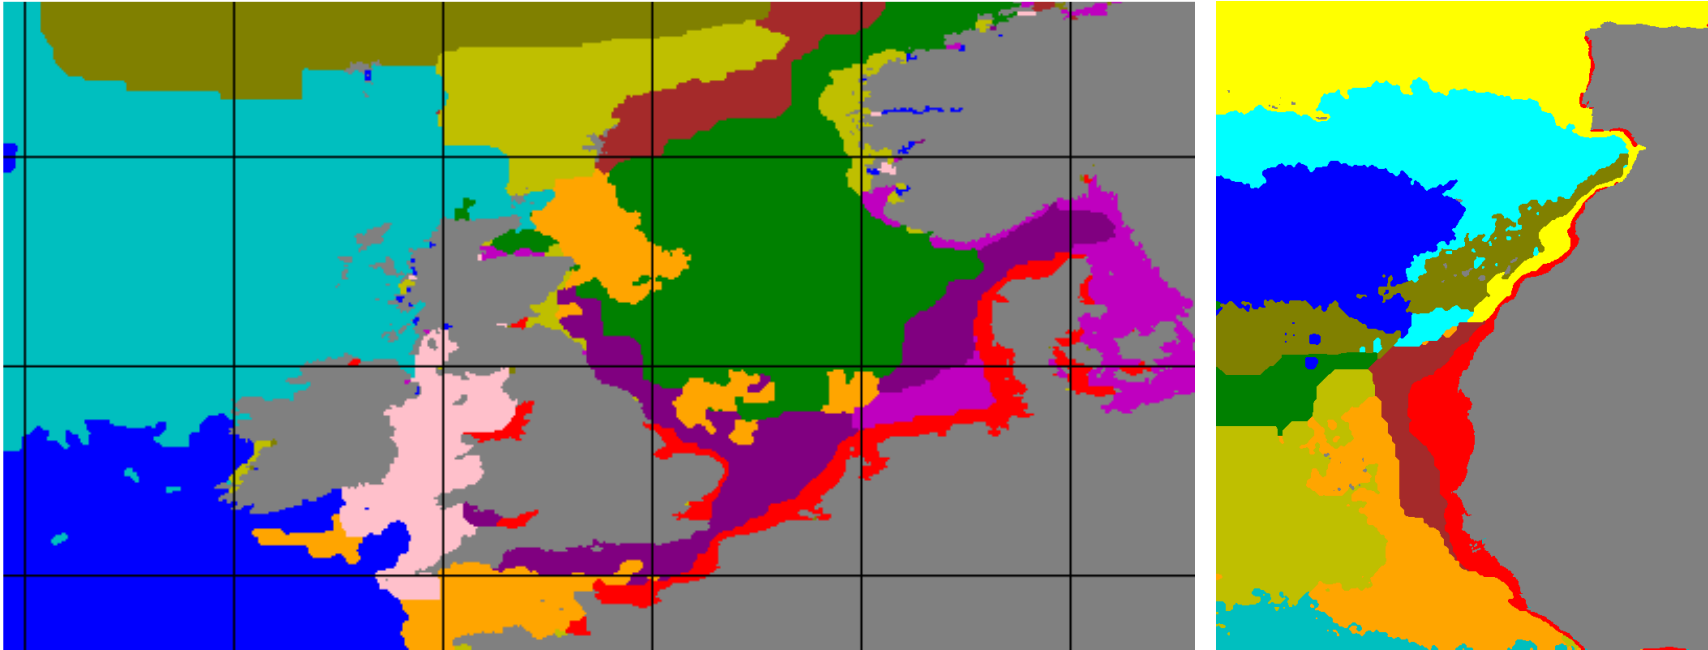

Primary production in the Atlantic

PP-based regional March-October significant anomaly trend 1997-2005 and 2006-2018 for north-east Atlantic, Iberian peninsula and Mauritania.

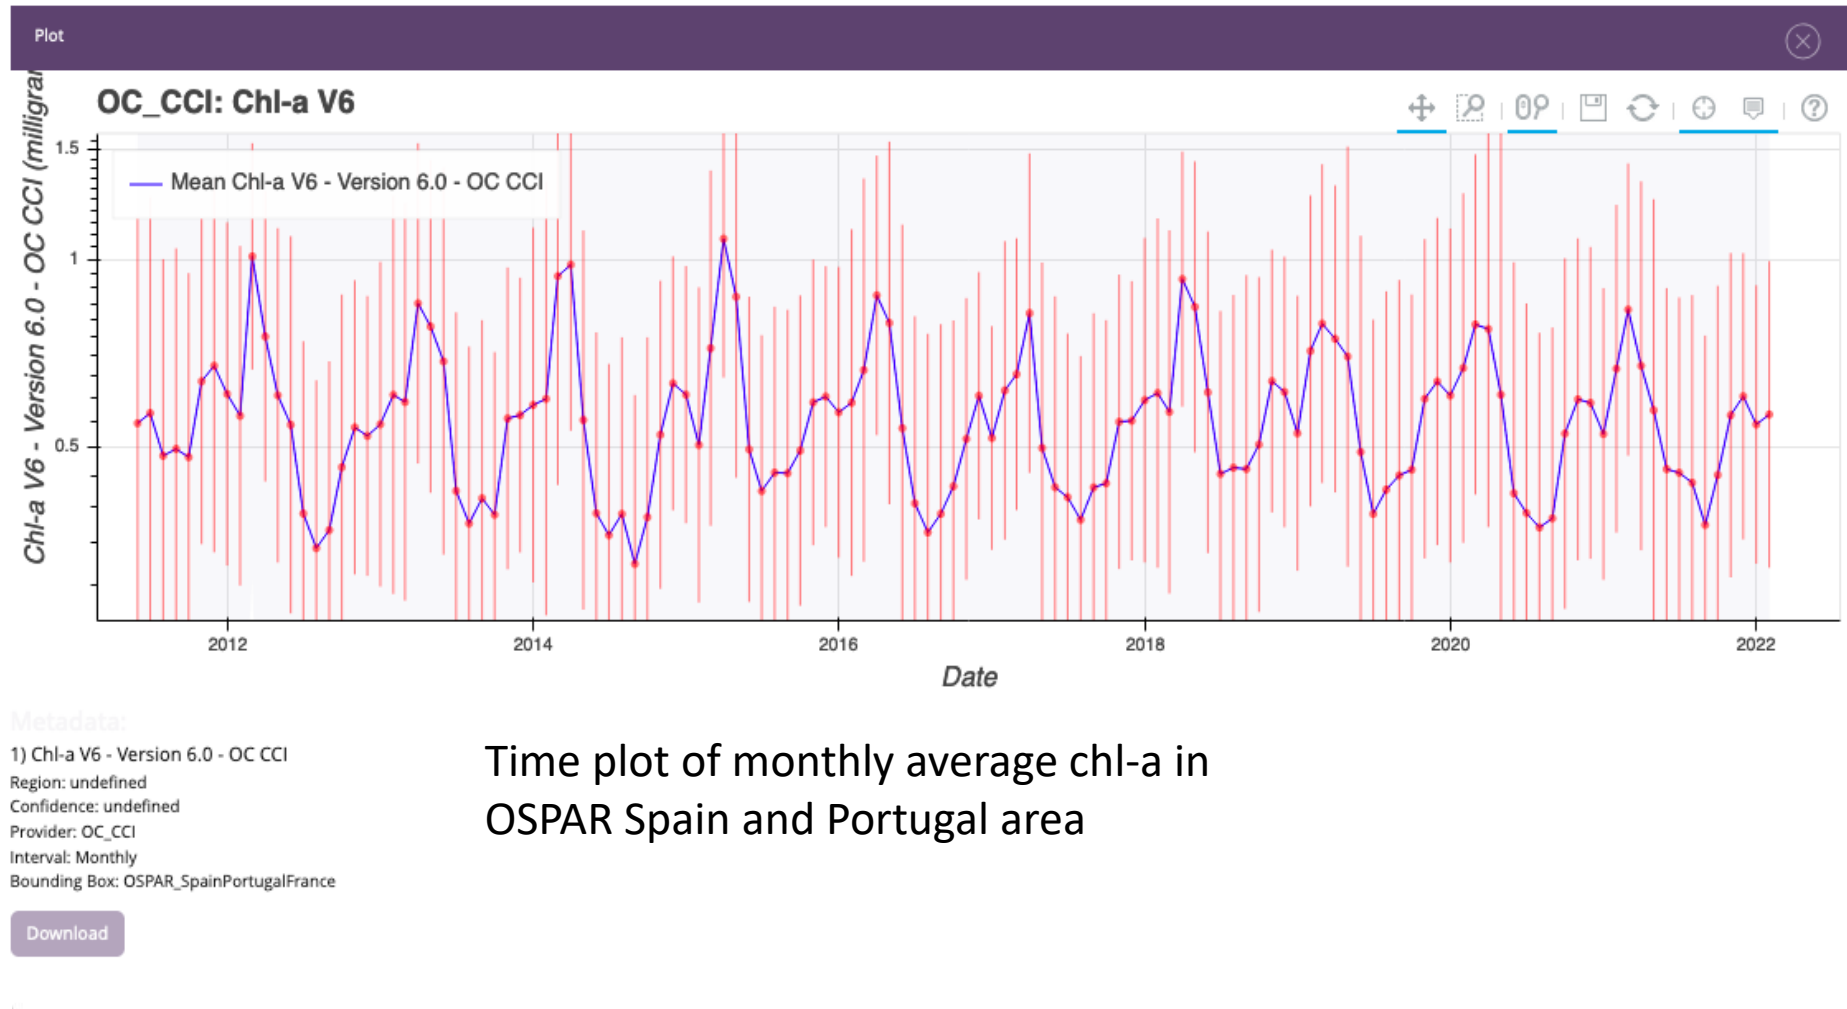

- Part of work was to classify Atlantic waters into regions of similar peak, timing, location and annual primary production
- Identified using k-means cluster analysis for the north-east Atlantic, Iberian peninsula and Mauritania.

Regions of similar peak, timing, location and annual primary production identified using k-means cluster analysis for the north-east Atlantic, Iberian peninsula and Mauritania.

- Most data are on open visualisation portals & iFADO portal

Time plot of monthly average chl-a in OSPAR Spain and Portugal area

Conclusions

- iFADO has made a contribution to, and benefitted from, EO
 - Guidance of research cruises with EO data
 - Contribution to satellite validation activities, important for Copernicus which relies on such research cruises
- Novel algorithms have produced data relevant to MSFD
 - Phytoplankton chl-a for eutrophication
 - Phytoplankton productivity
 - Phytoplankton size classes and diversity
 - Potential for monitoring plastic pollution
- Legacy of 6 papers published, in review or in prep
- Legacy of EO data available on visualisation portals

iFADO

INNOVATION IN THE FRAMEWORK
OF THE ATLANTIC DEEP OCEAN

Thank you
for your
attention!
